

NORTHGATE ORTHOPEDIC ASSOCIATES

PROCEDURE NOTE

Patient ID: NG-551029

Age: 66 Sex: Female

Date of Service: 05/22/2026

Place of Service: 11

Provider: Marcus D. Elleby, MD NPI: 1275639840

INDICATION:

Left knee osteoarthritis with persistent effusion and pain refractory to oral analgesics and physical therapy.

PROCEDURE PERFORMED:

Knee injection with ultrasound guidance, left knee.

Ultrasound guidance needle placement was used throughout.

DESCRIPTION OF PROCEDURE:

After informed consent was obtained, the left knee was prepped in the usual sterile fashion. Under direct ultrasound visualization, a 21-gauge needle was advanced into the suprapatellar recess. 12 mL of straw-colored fluid was aspirated. Triamcinolone acetonide 40 mg was injected without difficulty. The needle was withdrawn and a dressing applied. The patient tolerated the procedure well and there were no immediate complications.

ASSESSMENT:

Knee osteoarthritis, left, with effusion.

PLAN:

Ice as needed. Follow up in six weeks. Consider viscosupplementation if symptoms recur.

Electronically signed by Marcus D. Elleby, MD on 05/22/2026.
